

Error analysis: where the benchmark breaks

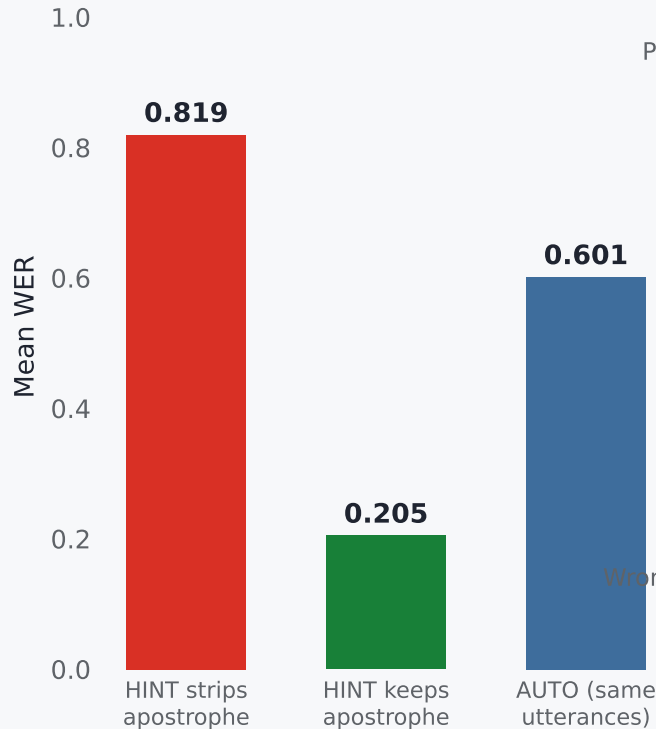

Phase 3A evaluation split · diagnostic only (no inferential claims) · all WER ≥ 1.0 records are Uzbek

A · Catastrophic errors (WER ≥ 1.0, n = 15)

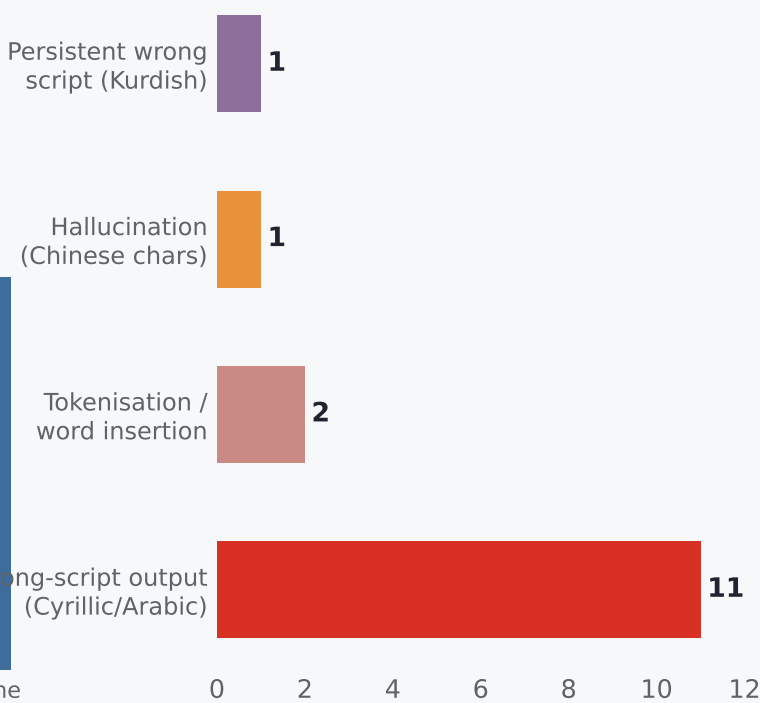

A · red = wrong-script (Cyrillic/Arabic) output despite HINT.

B · Uzbek HINT apostrophe confound

B · 7 of 45 apostrophe-bearing Uzbek HINT records (16%) strip the apostrophe, inflating WER.

C · Failure-type taxonomy

C · HINT changes the detection tag to uzb but does not always force Latin-script decoding.

All 15 WER ≥ 1.0 records are Uzbek (none Kazakh). These are valid data points — the frozen methodology applies uniformly and is not adjusted. Apostrophe omission changes word identity in Uzbek and modestly suppresses the measured HINT advantage.
