

Automatic language detection fails for Uzbek but not for Kazakh

ElevenLabs Scribe v2, AUTO condition · Phase 3A evaluation set (held-out, n=160 utterances) · focused pilot study

A · Language detection accuracy, AUTO condition

B · Cost of a wrong detection (Uzbek, AUTO)

Misdetections are dominated by Turkish (18), English (12), Russian (3); Cyrillic-script detections produce wrong-script output (WER ≥ 1). Detection accuracy computed from frozen Phase 3A results.
