

Research design: from multi-provider baseline to detection analysis to routing test

PHASE 2

Multi-provider evaluation

ElevenLabs Scribe v2 vs Google Chirp 2

600 utterances (300 uz + 300 kk)

× 2 conditions = 2,400 records

Descriptive: EL leads in

all four cells

PHASE 3A · ANALYSIS

Language-detection study

Held-out eval split: 160 utts

(70 uz + 90 kk)

AUTO detection: Uzbek 27%,
Kazakh 99%

Uzbek detection failure = the
strongest defensible finding

PHASE 3A · TEST

R1 routing experiment

R1: use HINT where AUTO
misdetects the language

PRIMARY: routed-HINT =
+0.0005, p=0.820

Success criterion NOT MET:
routing ≈ always-HINT

Focused pilot study — Uzbek and Kazakh only · ElevenLabs Scribe v2 in Phases 3A · contamination risk MEDIUM (public corpora) · no broad Central Asian coverage implied
