

AUTO vs HINT: paired per-utterance differences

ElevenLabs Scribe v2 · Phase 3A evaluation split · 160 paired utterances (70 Uzbek, 90 Kazakh)

A · Mean WER with per-utterance paired lines

B · Distribution of paired differences

SECONDARY analysis (not the primary hypothesis). Wilcoxon signed-rank, one-tailed: overall $p=0.075$; Uzbek $p=0.102$; Kazakh $p=0.245$. No comparison reaches $p<0.05$; all bootstrap CIs include zero. The descriptive Uzbek HINT advantage should NOT be presented as a proven improvement.
